RESPONSE TO ELECTION REQUIREMENT

Sir:

An Office Action dated May 3, 2005 and received for the above-identified application requires the applicant to elect a single species from among four identified by the Examiner.

The applicants would first like to identify what appears to be an error in the Office Action. The Examiner states that Embodiment 1 corresponds to "FIG. 1 - a MEM 1:4 switch module in accordance with the present invention." FIG. 1 is actually a schematic of a prior art 1:2 MEM switching arrangement applied to a 2-bit phase shifter circuit, and it is so labeled in the specification and on the figure itself. Presumably, the Examiner meant to refer to FIG. 2, which does show a MEM 1:4 switch module in accordance with the present invention.

The Office Action compels us to elect one of the identified species. Accordingly, the applicants elect:

Embodiment 1: FIG. 2 - a MEM 1:4 switch module in accordance with the present invention.

The following claims read on Embodiment 1:

- claims 1-17
- claim 21

The Examiner states that there are at present no generic claims. The applicants respectfully disagree, and assert that claim 1 is, in fact, a generic claim. Claim 1 is directed to the basic switch module structure illustrated shown in FIG. 2. FIG. 3 is minor variation of the embodiment shown in FIG. 2: the same basic switch module structure is employed, with the only difference being that signal output lines 26 are extended to the side.

With respect to FIGs. 4 and 5, these are simply exemplary applications of the switch module shown in FIG. 2 and claimed in claim 1: the same core structure shown in FIG. 2 is used to create respective phase shifters.

Since the basic switch module recited in claim 1 is common to all the embodiments shown, it is asserted that claim 1 is properly considered to be a generic claim.

Respectfully submitted,

Steven C. Patrick
